# Discover

The Amount value can be used to trigger the various credit card issuer response values that can be encountered when processing in the production environment. These amount triggers can be used by sending the card number specified in [Table 1](#).

Table 1: Discover test card details

Account Number	CVV2/CID	Address	Zip	Exp Date
60114993000000005	123	123 N CENTRAL	12345	2512

**NOTE:** Additional card numbers are available upon request.

[Table 2](#) contains the response codes returned from the certification system based on the last three numeric digits of the amount. Larger amounts can be used to trigger responses by adding digits to the left of the one; for example 21.05, 51.05, and 361.05 are all amounts that will receive an "05" response since the last three numeric digits in these amounts are "1.05." Amounts that fall outside of the certification system response range will receive approval responses as long as it is otherwise a valid transaction.

**NOTE:** In some cases the response from the network will be mapped to an 05 Response Code, in these scenarios you can see the response from the network in the Network Response field.
